

GALLI & CASSINA
Plug Valves
SINCE 1919

DOUBLE BLOCK & BLEED

PLUG VALVES

Galli&Cassina Profile

Galli&Cassina is a prominent Italian Company mainly involved in the manufacture of a complete range of Lubricated Plug Valves.

The company is located in Solaro near Milan (Italy) with extensive offices and workshop covering

Galli&Cassina was established in 1919, and it is one of the oldest Italian companies still involved in the manufacturing of valves. At this early stage the business activity was concentrated in the production of valves for domestic and industrial purposes.

After the first ten

years the company gradually directed its production towards the newly born Chemical industry; it was the first in Italy to produce valves in stainless steel and other new material cooperating with the demand of the most important chemical Companies.

It was not possible to expand the Milan factory any more which was built in 1930 and enlarged after the second world war. For this reason in 1991 Galli&Cassina moved to a new factory in Solaro (Milan) with a very modern plant equipment, very comfortable for the workers.

After 30 years of experience in chemical valves, Galli&Cassina started the production of Plug Valves in the Oil & Gas business becoming one of the most significant suppliers for all International Gas & Oil Companies all over the world.

Its sales activity

a 12.000 sq.mt. area including 5.000 sq.mt. of covered space.

covers most of the continents with a leading and growing presence in Europe, Middle East, North & South America and Far East resulting in a sales and service network with subsidiaries, branch offices and distributors, acquiring a reputation on high quality workmanship as well as on the reliability of its products.

Special care is due to the development in every aspect of the Company's management, complying with the continuous changes, requested by the evolution of the International markets.

The proved technical, productive,

and financial capabilities combined with the experience of human resources are the result of Galli&Cassina reputation all over the world.

Galli&Cassina's Quality Assurance System ISO 9001 - 2000 has been assessed, approved and certified by Lloyd's Register, while the API

6D and 6A monogram have been certified by API (American Petroleum

Institute) - Washington (U.S.A.).

Nowadays Galli&Cassina is proud to celebrate its 90 years, presence in the world of the valve market.

Galli&Cassina's historical background and experience allow the Company to offer strong professionalism and a comprehensive range service.

That will surely guarantee results in the future.

However Galli&Cassina will use the best effort to keep the customers informed of any changes made.

Double Block & Bleed Plug Valve

Three - dimensional CAD system and the Finite Element Modelling allow the optimization of every step of valve's design:

- FEM stress calculation of the pressure containing parts **(A)**
- Raw Casting design
- Final Assembly Design Check

Introduction

Galli & Cassina is proud to announce a NEW DOUBLE BLOCK & BLEED plug valve series. The addition of this API-6D compliant design is another major contribution Galli & Cassina's Plug valve line.

The Double Block and Bleed valves present similar features as the Galli & Cassina "Single Plug" series.

These are marketed with Reduced or Full bore, full conduit, pig-able design.

All plug valves are with Standard or Pressure balanced plugs. The Double Block and Bleed valve is developed to meet the industry demand for an alternate to other design where the service often develop problems with leakage in the seating areas. These problems are eliminated with the DBB valve as the plug valve does not have conventional seats as in gate or ball valves.

The DBB valve offers two plugs in one body, but maintain the face-to-face as per API-6D.

Therefore it is possible to replace other valves with API-6D f-f dimensions. An added feature is the substantially reduced weight compared to a conventional where three individual valves are installed to obtain the same feature.

Applications are mainly in the O & G sector where special features often are required, due to severe operating conditions.

According to API-6D these valves must warrant "Zero-leakage" at maximum differential across the valve.

The transportation of Hydrocarbon gasses or Crude Oil which may contain H₂S, CO₂ or other contaminants often create serious corrosion problems in valves. For this reason Galli & Cassina offer a wide range of specialty materials in accordance with NACE or special customer requirements.

To resolve the industry problems with corrosion, erosion and abrasive services under severe operating conditions Galli & Cassina offer an extensive range of "hard face materials" as Stellite, Inconel and Tungsten Carbide and others as Duplex, 6Mo or Nickel alloy.

The hard facing is applied in the Galli & Cassina factory using own automatic welding robot's and under strict control of the R&D and QA Department. Galli & Cassina is a ISO 9001 approved facility and hold API-6A and API-6D (with monogram) approvals.

Product Identification System

Identification numbers here shown are used to describe essential features of Galli&Cassina valves

Example: 200 DRR06R0001

200	Size	<ul style="list-style-type: none"> • 1" 025 • 1 1/2 040 • 2" 050 • 3" 080 • 4" 100 	<ul style="list-style-type: none"> • 6" 150 • 8" 200 • 10" 250 • 12" 300 • 14" 350 	<ul style="list-style-type: none"> • 16" 400 • 18" 450 • 20" 500

0001	Internal Material Identification (TRIM)	• According to client's materials requirement		

The Code used as sample above (200 DRR06R 0001) identifies a: DN 200 (8") - Double Block & Bleed Valve - Reduce bore - Gear Operator - ANSI 600 - Flanged RF ends connections - Standard carbon steel materials, suitable for ambient and high temperature service.

Standard Features: the Pressure Balance System

Figure A

The operating system of Pressure Balanced Plug Valves (shown in Fig.A) consist in the pressure equalization between the port area and the top/bottom of the plug with two holes.

The upper hole connects the plug port area with the top of the plug, while the lower maintains the pressure equalization between the port area and the bottom of the plug. The Pressure Balance System ensure line pressure acts on the plug to reduce the valve torque and avoid the possibility of plug seizure, even after a prolonged time in the open or closed position.

The tapered shape of the

plug guarantees that the force created by line pressure pushes the plug against the body seat. As differential pressure increase so does the sealing capability of the Pressure Balanced Plug Valve. Thanks to pressure balance feature, and to the integral metal to metal design, Plug Valve can always be opened against the maximum delta pi. No by-pass is necessary to preserve seat integrity. Periodic lubricant injection, and seat adjustment can be carried out when the Plug Valve is under full pressure. Only severe seat damage will cause a reduction of valve sealing.

Special Features: Coating & Overlay

Hardfacing

Galli & Cassina's researching, development and investment in hardfacing materials against corrosion or abrasion attack, in cooperation with specialized companies and external laboratories, have given the right

experience to apply in own workshop by automatic welding robot machines all kind of overlay (Stellite, Inconel, Duplex, 6MO, Nickel alloy and Tungsten Carbide) on each component of the valve directly. These performance are especially highlighted in case of severe operating

conditions. Moreover, higher hardness values greater than 1100 HV/70 HRC) compared to standard hardfacing (Stellite 6, with 37-40 HRC hardness) provide a very good abrasion & wear resistance. All the overlay applications are controlled by NDE test, such as LP UT PMI and

thickness check, witnessed by G&C Quality Control inspectors or customer's inspectors upon request. The improvement of the welding quality can guarantee a high performance of G&C plug valves in Off-Shore/On-Shore Petrochemical and Drilling applications.

Electroless Nickel Plating

The transport of wet hydrocarbon gases contaminated with hydrogen sulphide, carbon dioxide or other similar fluids containing appreciable level of sulphur, can create various corrosion problems to some component in plug valves.

These environments are not always recognized under service conditions, therefore in order to obtain a high quality corrosion

resistant, all the material for each component of the valves, are selected in accordance with the requirements of NACE-Std. MR-01-75 Latest Edition. Moreover the use of an electroless nickel plating on plug surface provides more corrosion protection to hydrogen sulphide crack-resistant base metal. Standard ENP is in accordance with ASTM B733 Std with a minimum 0.003" (76 Microns) thickness, unless otherwise specified in the customer's specification.

Tungsten Carbide Coating

A series of metal carbide coatings (WC+Ni, Cr or

WC+Co or WC+Co, Cr), usually known as Tungsten Carbide (TCC) allows to achieve higher performance in terms of valve working life.

These performances are specially highlighted in case of severe operating conditions. Moreover, higher hardness values (greater

than 1100 HV / 70 HRC) compared to standard hardfacing (Stellite 6, 37 - 40 HRC) provide a very good abrasion & wear resistance.

Material Selection Guide for GALLI & CASSINA Valves

Trim materials are designed according to the service conditions.

- 1 Standard Carbon Steel Body and Plug. (ASTM-A216 WCB/WCC material) suitable for general services.
- 2 Carbon Steel Body and Plug (A352 LCB/LCC material) suitable for low temperature services.
- 3 Carbon Steel Body and Plug (ASTM A216WCB/WCC material) suitable for "SOUR SERVICE"(H₂S and CO₂) according to NACE-MR.01.75/Latest Edition.
- 4 Special Austenitic (6MO) and Ferritic-Austenitic Stainless Steel (Duplex and Superduplex) suitable for sea water and corrosive services.
- 5 Nickel-Chromium-Iron alloy (i.e. Alloy 20), Titanium & Titanium alloy, carbon steel with Inconel 625 cladding and stellite or Tungsten carbide hardfacing for abrasive/corrosive service.
- 6 Other materials upon request.

Standard Features: Plug PTFE Antifriction Treatment

Carbon Steel plugs are subjected to the following treatments:

- A) Case hardening.
 - B) Antifriction treatment.
- The case hardening has the purpose to increase

only the hardness of the plug surface which is subjected to wearing, keeping at the same time the mechanical properties of the base material unchanged.

Consequently the base material has more toughness and resistance against impacts. The Antifriction treatment is basically carried out on the plug

- to obtain the following advantages:
- Low friction between plug and body.
 - Low torque.
 - Wear resistance.
 - Resistance to seizure.

Plug with PTFE Antifriction treatment.

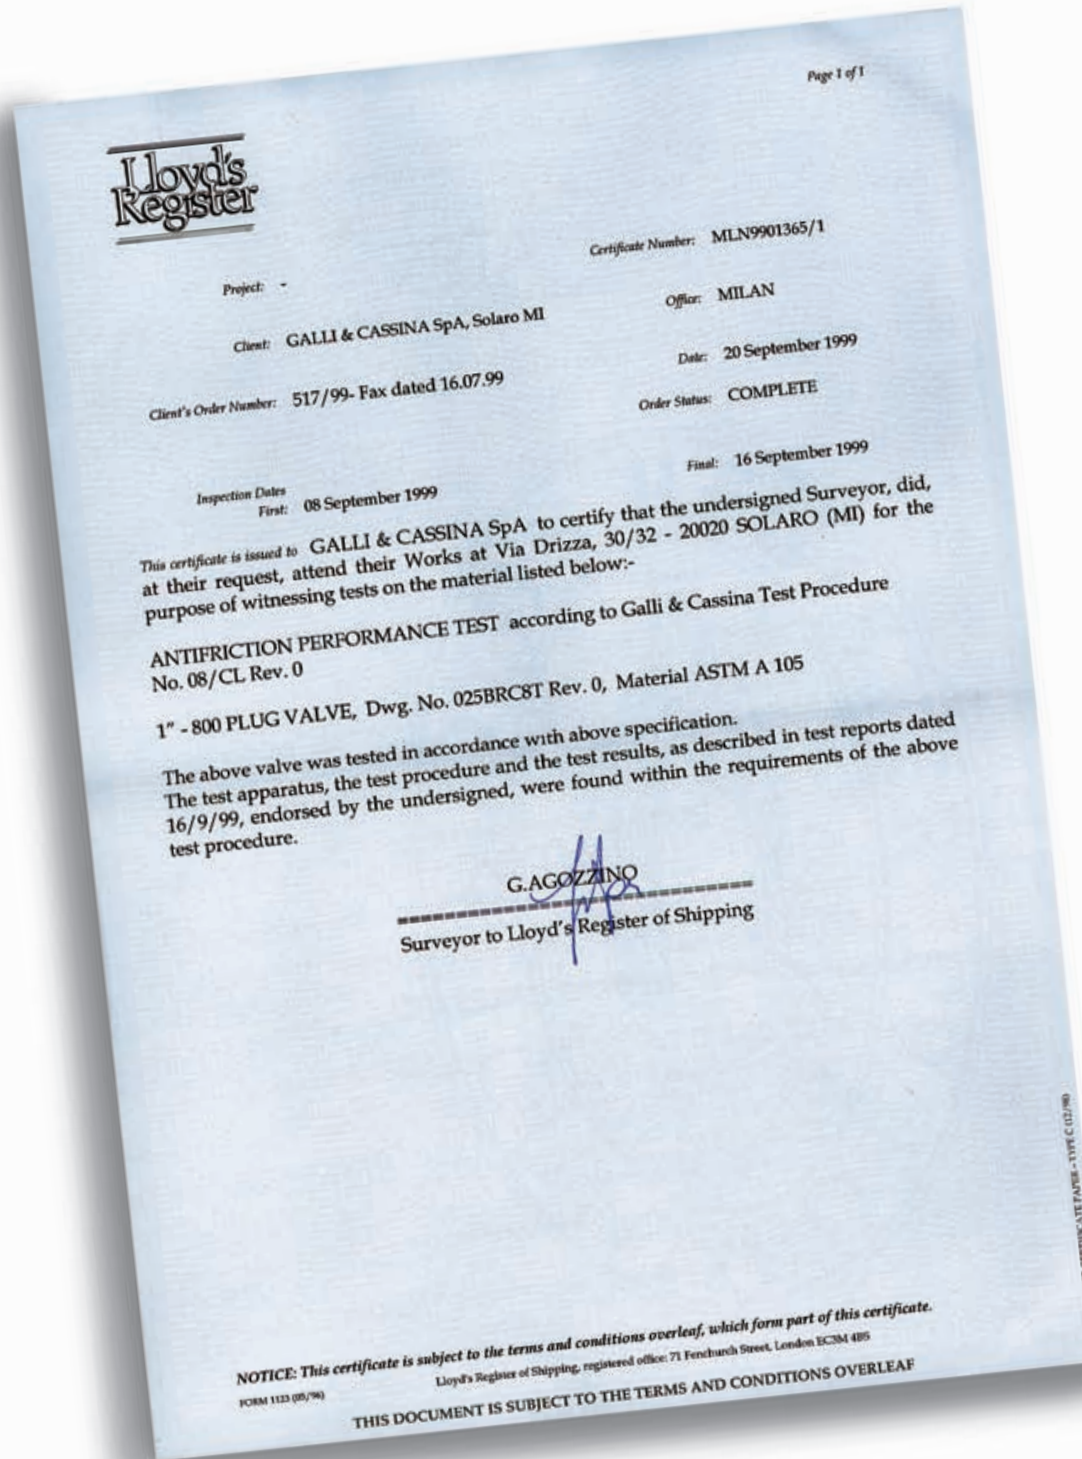

Plug without PTFE Antifriction treatment.

Plug with PTFE Antifriction treatment.

Plug without PTFE Antifriction treatment.

▲ The purpose of the above test is to prove that Galli&Cassina antifriction treatment made on plug surface, is guaranteed even after 30,000 cycles (open/closed position).

Quality Assurance Programme

In accordance with the requirements of the Pressure Equipment Directive 97/23/EC and the Pressure Equipment Regulations 1999 and UK Statutory Instrument 1999 No. 2001

This is to certify that the Quality Management System of:

Galli & Cassina S.p.A.
Solaro (MI)
Italy

has been assessed against the requirements of Annex III, Module H of the Pressure Equipment Directive 97/23/EC, and Schedule 4, Module H of the Pressure Equipment Regulations 1999 and conforms to the requirements for the products shown below:

Design and manufacture of manual and actuated plug valves (one way, two way, three way and four way) in carbon, alloy and special alloy from 1/4" to 30" (DN32 to DN750) class rating up to 600lb (100), from 1/4" to 24" (DN32 to DN600) class rating up to 1500lb (PN 250), from 1/4" to 12" (DN32 to DN300) class rating up to 1500lb (PN 420), from 2" to 10" class rating up to API 1

Approval is subject to the continued maintenance of the quality system in accordance with the requirements of the above Directive and Regulations.

Authorisation is hereby given to use the LR Notified Body Identification Number 0038 in accordance with the requirements of the specified Directive and Regulations for the products as identified above

Certificate No: COV 021
Date of Issue: 27th Jun
LR Identification Number 0038

FORM 7004 (03/2000)
Lloyd's Register of Shipping, registered office

Certificate of Authority to use the Official API Monogram

License Number: 6A-0520

The American Petroleum Institute hereby grants to

GALLI & CASSINA S.P.A.
Via Drizza, 30/32
Solaro, Milan
Italy

to manufacture products under the conditions in the official License Agreement entitled API Spec Q1[®] and API Spec 6A

and the API Monogram should be used in conjunction with this authorization to use the Official API Monogram of the American Petroleum Institute.

Valves at PSL 1 through 4

American Petroleum Institute
John S. Madini
Director of Training and Certification Programs

Certificate of Authority to use the Official API Monogram

License Number: 6D-0049.1

The American Petroleum Institute hereby grants to

GALLI & CASSINA S.P.A.
Via Drizza, 30/32
Solaro, Milan
Italy

the right to use the Official API Monogram[®] on manufactured products under the conditions in the official publications of the American Petroleum Institute entitled API Spec Q1[®] and API Spec 6D and in accordance with the provisions of the License Agreement.

In all cases where the Official API Monogram is applied, the API Monogram should be used in conjunction with this certificate number: 6D-0049.1

The American Petroleum Institute reserves the right to revoke this authorization to use the Official API Monogram for any reason satisfactory to the Board of Directors of the American Petroleum Institute.

The scope of this license includes the following product: Plug Valves
QMS Exclusions: No Exclusions Identified as Applicable

American Petroleum Institute

Quality Assurance System

After 90 years of manufacturing experience and latest technology, Galli&Cassina Quality Assurance System has been assessed, approved and certified against the following quality assurance standards: ISO 9001-Vision 2000 and API Q1. Rigorous procedures and internal audits guarantee that the Quality System is implemented at all stages, starting from incoming raw materials, production, inspection, assembly, final

test, packing and shipping. Every product is designed and manufactured to conform to uniformly high standards. These standards are assured by a quality management system which includes ISO 9001 certification and testing of all products prior to shipment. Advanced design, durable construction materials and rigid manufacturing standard provide valves

you can rely on for years of trouble-free performance. Since its beginning in 1919, Galli&Cassina has maintained its commitment to quality product and satisfied customers. Our focus on product variety, technical expertise and company support remains constant, from drawing board to user satisfaction, our commitment is continuous.

Quality Assurance Development

Since 1981 Galli&Cassina is authorized to use the monograms of American Petroleum Institute (licence N. 6D - 0049.1) (licence N. 6A - 0520). As a guarantee and certification of the Quality Assurance Program implemented, Galli&Cassina has the quality system issued by Lloyd's Register certifying that Galli&Cassina Quality System conforms to the European Standard ISO 9001: 2000, API Spec. Q1, and is always subject by internal/ external audit to be in compliance with

the customer requirements. In addition Galli&Cassina Plug Valves are in compliance with CE Pressure Equipment Directive PED N. 97/23/EC and ATEX (N. 94 /9 /EC) for products intended for use in potentially explosive atmospheres.

Customer Service

Galli&Cassina's Customer Service is always willing to assist the customer with a prompt response to "service" requests. Full after sales services assistance can be offered either at our workshop or on site testing, spare parts supply;

Training programs, on operation and safety; Final-Documentation.

Lubricants

Galli&Cassina Plug Valves can use different types of Climax lubricant grease suitable for various services.

The operating conditions must be specified at enquiry stage enabling us to advise which type of sealant is suitable.

The lubricant grease is available as a spare part item and can be ordered as:

- **Cartridges (suitable for hydraulic gun pump).**
 - **Drums (suitable for pneumatic pump).**
- For the selection of the correct lubricant, Galli&Cassina staff is always available at the customer's request to recommend the suitable lubricant.**

Climax Hydraulic Gun No.1699

This specially designed, high pressure handgun, light in weight (appr. 16lbs.) is more rugged than conventional types and meets exacting demands of plug valve sealants. Built for servicing plug valves, all parts are machined with minutye accuracy.

The polished hardened steel piston is perfectly fitted in the high pressure barrel to provide absolute smoothness of operation. The CLIMAX 1699 is self-priming and can be used in any position. Because of its hydraulic principle, this gun exerts more pressure than any other portable gun.

This gun is equipped with a CLIMAX 1699 Button Head Coupler for connection to the button head sealant fitting in the shank of the valve.

This coupler has a built - in feature which locks it to fitting when the gun is under positive pressure.

The coupler cannot be connected to or separated from the fitting with the gun under pressure. This pressure may be relieved by a turn of the by-pass valve on the gun. The by-pass valve should not be closed to a point where it is jammed into its seat, nor should it be opened tight against the stop.

The valve should be closed firmly, but no tightly. It is not necessary to open the valve past one full turn. Due to "built - in" safety features, the CLIMAX 1699

provides the maximum safety to both the valve and the gun itself. The hydraulic system of the gun is equipped with a relief fitting to protect the

gun from injury if the operator were to continue to pump after the gun had been depleted of valve sealant.

Also, to prevent damage to the valve and sealant gun, in the event of sealant clogging the system or the operator pumping too fast, a CLIMAX 15000 psi gauge is optional equipment. This accessory indicates the point at which sufficient sealant pressure has been developed within the valve.

The gauge also indicates valve adjustment and other services required. The CLIMAX 0 -15000 psi gauge is the highest quality, most reliable glycerin filled gauge available.

The one piece die cast brass case and heavy duty bourdon tube and movement enable the gauge to stand up to the shock and vibration encountered on the most demanding applications. The CLIMAX gauge also features a rubber gauge protector.

A carrying case for the CLIMAX Model 1699 is optional. Refer to the part list for available options.

Note: Gun shown is a 1699-S model complete with hose assembly, gauge, tee and "Z" swivel.

Automatic Lubrication

Galli&Cassina Plug Valves can be provided with a special automatic lubricant pump to facilitate lubrication maintenance service.

The automatic pump model depends on the size of valve and its number of open/closed cycles enables

us to calculate the consumption of the lubricant grease during the operating service. The automatic pumps are available either electric or pneumatic motor type at the following operating temperature range: -20 to 40°C.

Climax Lubricants

Lubricant and No.	Type Available	Color	Temp. Range From To	Principal Services	Unsuitable For
220	Stick Bulk	Clear	-75 to 250 °F -59 to 121 °C	Very cold service for pipe lines, compressor stations, gasoline plants and crude oil production fields. For Liquid Service.	Aromatic, Solvents.
262	Stick		-85 to 250 °F -65 to 121 °C	Same as above-Gas Service.	LPG
400	Stick Bulk	Red	-20 to 450 °F -29 to 232 °C	Acids and Caustics.	Liquid Hydrocarbons.
600	Stick Bulk	Tan Brown	-20 to 500 °F -29 to 260 °C	General gas and general Hydrocarbons service.	LPG
650	Stick Bulk	Blue-Green	-40 to 500 °F -40 to 260 °C	Hydrocarbon and L.P.G. service	Aromatic, Alkalies Solvents.
711	Stick Bulk	White	32 to 400 °F 0 to 204 °C	Aviation gasoline, Jet fuel, fuel blends of Alkylate.	100% Benzine.
750	Stick Bulk	Black	0 to 600 °F -18 to 316 °C	Asphalt hot oil service Salt brine, high temperature steam.	Aromatic, Alkalies Solvents.
800	Stick Bulk	White	-20 to 450 °F -29 to 232 °C	Butane, Butadiene, Carbon Tetrachloride, Ethane, Propane.	Alkalies
900	Stick Bulk	Black	-20 to 650 °F -29 to 343 °C	Natural gas, petrochemical plants, rubber plants, and hot Hydrocarbons service.	Alkalies
901	Stick Bulk	Black	-30 to 300 °F -34 to 149 °C	Cold weather, Hydrocarbon lubricant.	Alkalies
950	Stick Bulk	Amber	-40 to 300 °F -40 to 149 °C	Propylenes, Benzenes Toulene, Butadiene, Xylenes, Styrene, Cumenes	Alkalies
1034-MT	Stick Bulk	Cream	-20 to 400 °F -29 to 204 °C	Liquid and gaseous. Aliphatic hydrocarbon service. (wet or dry natural gas)	Alkalies

Fire Safe Test

All Galli&Cassina's Plug Valves have been tested against fire resistance, according to API - 6FA and BS 6755 - Part 2 standards and witnessed by international third party.

Metal to Metal Seat, diaphragm sealing as well as the stem sealing compound with graphite guarantees a high reliability performance of our Plug Valves while in exposure to Fire Test conditions.

Available Tests

- (1) Grade CF8C shall have a columbium content of not less than 8 times the carbon content but not over 1,00%
 (2) For each reduction of 0,01% below the specified maximum carbon content, and increase of 0,04% Mn above the specified maximum will be permitted up to a maximum of: 1,28% for WCB and LCB; 1,40% for WCC and LCC.

(3) Pitting Resistance Equivalent Number (PREN) = Cr + 3,3Mo + 16N ≤ 40.

(4) For 3/4" (M20) and under: 110/(760), 95/(655) 15; over 3/4" (M20) up to 1" (M24): 100/(690), 80/(550), 20 over 1" M24 up to 1.25" (M30) 95/(655), 65/(450), 25 over 1.25" (M30) up to 1.5" (M36): 90/(620), 50/(345), 30.

(5) For B7M and L7M grades, a minimum carbon content of 0,28% is permitted, provided that the required tensile properties are met in the section size involved.

GALLI&CASSINA in the World

Our products are being used in the most important Plants and Gas Pipelines all over the world.

Galli&Cassina Plug Valves are used in the most important hydrocarbon plants and gas pipelines all over the world.

For over 70 years Galli&Cassina has been committed to provide service to the end-users with a full range of products ensuring total customer's satisfaction.

Galli&Cassina is represented by sales offices worldwide and you are requested to contact our main office in Italy for more details.
